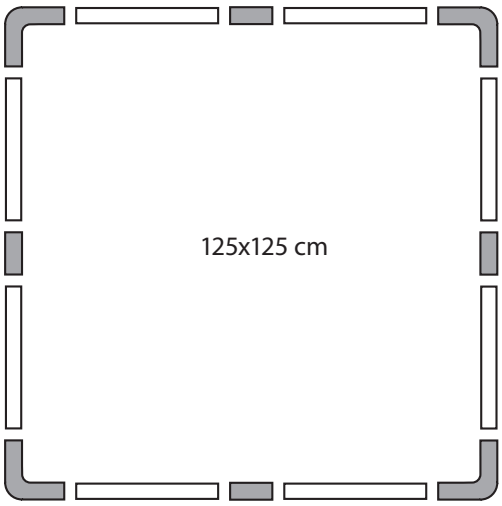
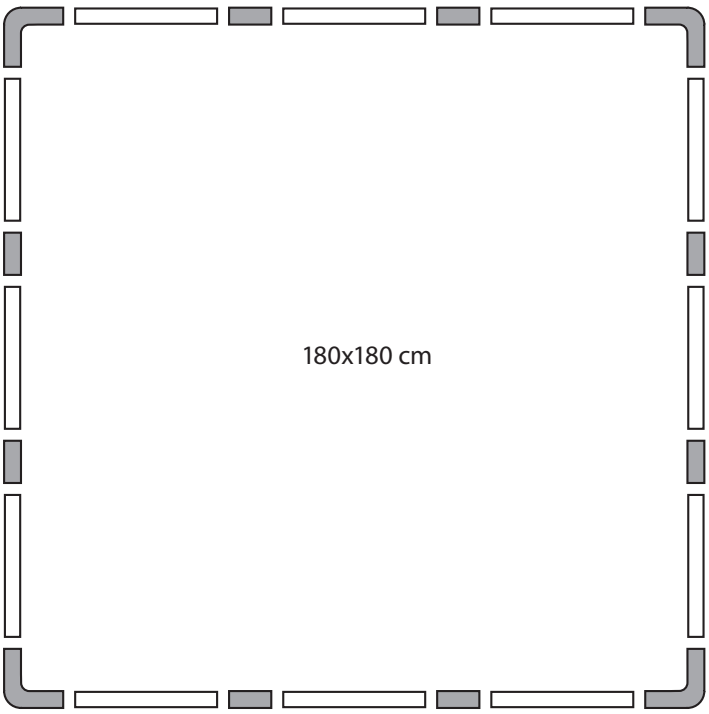
FRAME COILS ASSEMBLY SCHEME

The frame coil consists of plastic pipy parts that should be inserted one into another and form the frame square. (see picture bellow). The acual coil is a special cable-like circle, that should be attached to the carrying frame. The plastic frame is used to support the search coil circle cable. The coil cable CANNOT be inserted in the pipes. Instead, the cable is attached to the frame with welcro straps. The frame only supports the coil cable.

After you asseble the frame, you have to attach the coil cable circle to the plastic frame using the velcro straps.




Finally, attach the carying straps on two opposite sides of the frame, attach the coil cable to the main device and you're ready to go.
